Matvei Zhukov

December 19, 2021

I have chosen flake8, mccabe and Bandit since these tools combination is easy to install and configure and also they combine different checkers.

flake8 detected 4 warnings

script/t_script.py:4:1: F401 'matplotlib' imported but unused

script/t_script.py:5:1: F401 'copy' imported but unused

script/t_script.py:191:121: E501 line too long (122 > 120 characters)

script/t_script.py:402:56: W292 no newline at end of file

My configuration file:

exclude = .git

ignore = W605

max-line-length = 120

max-complexity = 10

(W605 is ignored since it's fake warning about math mode).

max-complexity is mccabe parameter.

All warnings were fixed.
